

Graduation Intelligence Center 2.0 Illustrated User Guide

For pilot schools using the local demonstration environment

This guide walks a school team through the Graduation Intelligence Center pilot workflow using the fictional demonstration environment. It explains how to start the program, complete first-time setup, upload data, review class grids, resolve unmatched records, customize school requirements, manage users, back up data, and reset the demo between presentations. The screenshots shown here come from the local demo environment and contain fake records only.

Use Case	Where To Go	What It Does
Start a pilot	First-Time Setup and User Management	Creates the school profile and secure staff accounts.
Load students	Upload New Data	Imports rosters or existing graduation grids and creates class grids.
Track progress	Class Grids and Student Profile	Shows requirements, test evidence, transcripts, flags, and notes.
Support counselors	Reports	Exports class grids, retesting lists, credit checklists, agreements, and custom reports.
Customize for a school	Rules Wizard and Grid Columns	Lets Admins configure local requirements and columns without coding.

Quick Start

For a normal pilot demonstration, use the dedicated demo package instead of the live school installation. The demo runs on port 5001 and uses its own demo_data folder. It should not be used with real student files.

- 1. Open the demonstration folder.
- 2. Double-click Start Graduation Intelligence Center DEMO.bat.
- 3. Open http://127.0.0.1:5001 in a browser.
- 4. Create the presenter Admin account if prompted.
- 5. Open Class Grids to show preloaded senior and junior examples.
- 6. Use the demo_import_files clean folder to demonstrate roster and assessment uploads.
- 7. After the presentation, close the server window and run Reset Graduation Intelligence Center DEMO.bat.

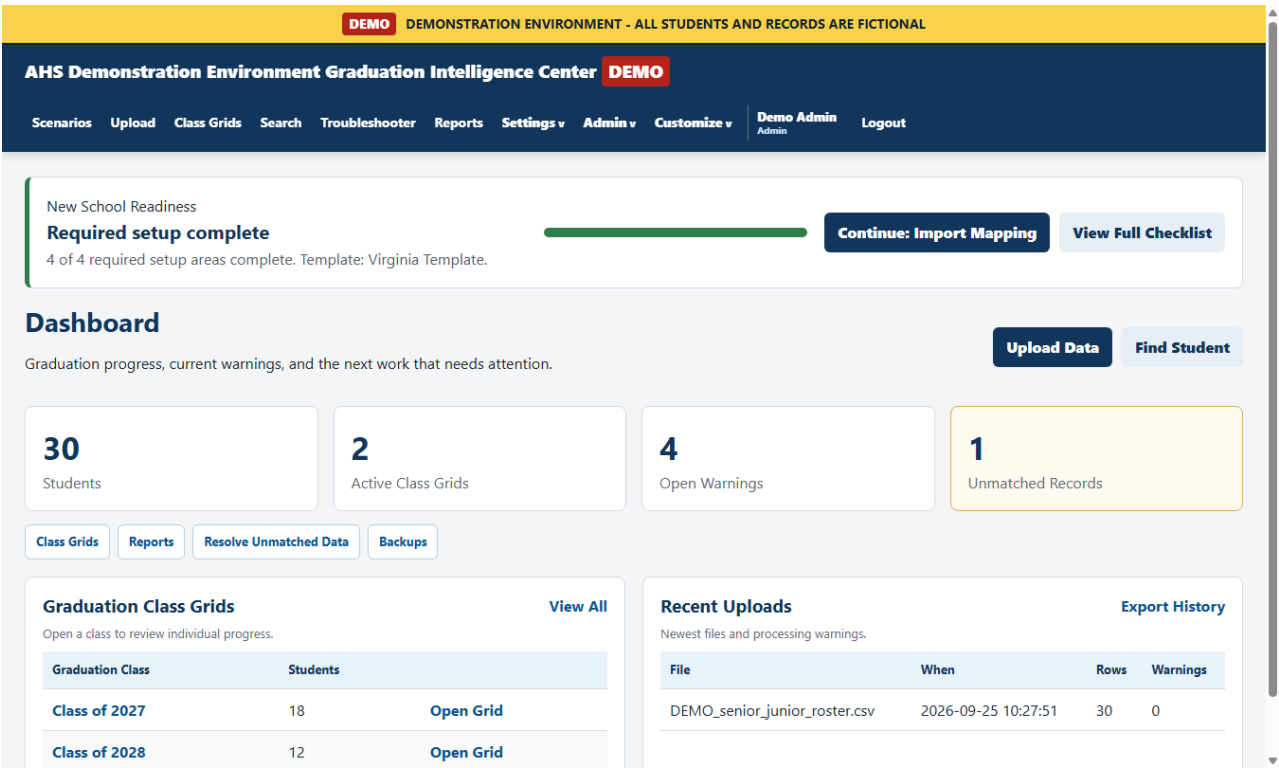

For a live school installation, use the school server or approved school computer and port 5000 unless district IT configures a different address. Keep the host computer or server on while staff are using the system.

Main Workflow

Dashboard

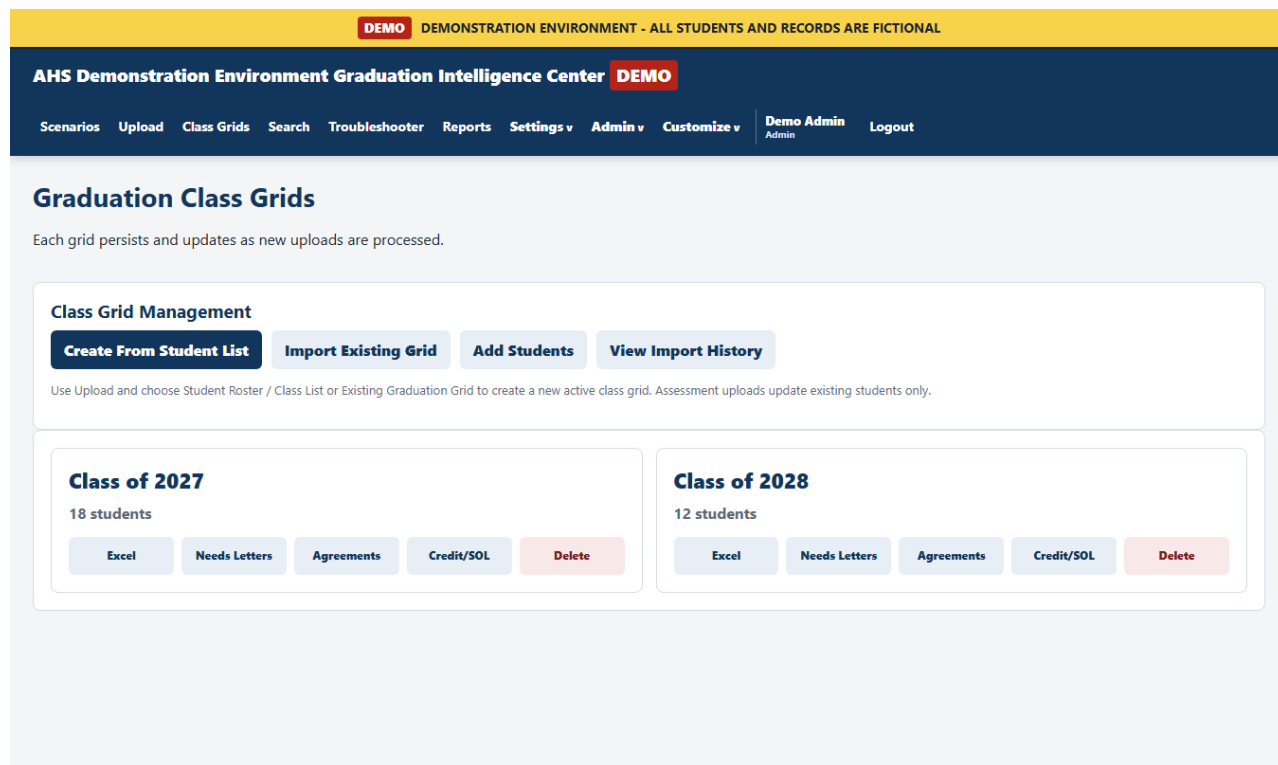

Use the dashboard to see student counts, recent uploads, warning items, and shortcuts to major work areas.

Dashboard screen in the fictional demonstration environment.

Class Grids

Open each graduating class grid, create new grids from rosters, and review class-level progress.

Class Grids screen in the fictional demonstration environment.

Graduation Class Grid

Review color-coded graduation status, SOL and substitute-test evidence, 3E readiness, CPR, employment credential status, and report actions.

- Green cells indicate a requirement is met.
- Red cells indicate missing or not-yet-met requirements.
- Yellow cells can show substitute-test evidence or items needing review.
- Clickable or hoverable score areas show the supporting test history when available.

Upload New Data

Import rosters, state assessment files, transcripts, credentials, CPR files, and custom local spreadsheets.

- Use Student Roster / Class List to create students and class grids.
- Use Existing Graduation Tracking Sheet to import a school current grid.
- Use State Assessment Upload for Pearson or other state assessment score files.
- Use Transcript File for transcript PDFs or supported transcript files.
- Use simple substitute-test imports for Workplace Docs and Business Letter Writing when available.

Reports screen in the fictional demonstration environment.

Troubleshooter

Resolve unmatched records caused by name spelling differences, missing IDs, transfers, or graduate records.

- Match unmatched rows to an existing student when a name or ID is slightly different.
- Create a new student when the record belongs on a grid but does not exist yet.
- Mark graduated or transferred records so they do not clutter active grids.

Troubleshooter screen in the fictional demonstration environment.

Customization And Setup For New Schools

GIC 2.0 keeps the Virginia model ready for Virginia schools while also giving other schools a structured way to build their own requirement setup. Admin users can add custom tracking fields, choose grid columns, build reports from tracking fields, and use the rules wizard to review state or district requirements before activating them.

8. Start with First-Time Setup and choose Virginia Template or Custom / Other State Template.
9. If using a custom state, open the Graduation Rules Wizard and upload state or district requirement documents.
10. Review the proposed rules in readable form, edit what is needed, validate the configuration, then approve and activate it.
11. Open Grid Column Customization to select which fields should appear on the main grid.
12. Create custom tracking fields for local items such as community service, FAFSA, senior project, local seals, or fees.
13. Use Custom Reports to build reports tied to those fields.

Grid Column Customization

Choose the columns shown on the main grid and add local tracking fields when a school needs something specific.

Graduation Intelligence Center 2.0 Pilot User Guide | Fictional demo screenshots only

Security And Data Stewardship

The pilot is designed as a local application. Student files are uploaded into the school local data folder or district server location, not into a vendor cloud account. The demo package uses fictional records only. Live schools should follow district policies for access, backups, storage, and device security.

Area	Pilot Practice
User roles	Admin and Counselor accounts can work with data. Viewer accounts can view records but cannot upload or edit.
Passwords	Passwords are stored as hashes. Do not share accounts.
Backups	Create a manual backup before large imports or updates. Automatic backups are created before uploads.
Exports	Treat exported spreadsheets and PDFs as student records. Store and share them only through approved school processes.
Demo use	Use the demo package for presentations. Do not place real students into the demo environment.

User Management

Create Admin, Counselor, and Viewer accounts. Viewer accounts can see records but cannot upload or change data.

Create manual backups, review automatic backup behavior, and restore only with Admin approval.

Backups screen for access and data protection tasks.

Reports And Printed Documents

Reports are meant to make counselor work faster. Schools can export class grids to Excel, print graduation agreements, print credit and SOL checklists, identify students missing requirements, and build custom reports tied to local tracking fields.

- Class grid Excel exports are useful for counselor review and meetings.
- Graduation agreements summarize where a student stands and what supports are recommended.
- Credit and SOL checklists show completed, missing, and in-progress coursework.
- Retesting and missing-assessment reports help plan testing windows.
- Custom reports can focus on local fields selected by the school.

AHS Demonstration Environment - Class of 2027 Graduation Agreement

Student Name: MARCUS BENNETT

Graduation Class: 2027

Diploma Type: Standard

Counselor: Demo Counselor C

Date Generated: 2026-09-25

Dear Senior and Parent/Guardian,

Graduation is one of life's great milestones, and we are proud to partner with you in reaching this important goal. To participate in graduation ceremonies, students must meet all Virginia Department of Education requirements for their diploma type.

Current Graduation Status

Requirement	Met?	Notes
English Verified Credit (2)	Yes	EngRLR: 430; EngWrit: 423
Math Verified Credit (1)	Yes	Alnol: 427; Geom: Verified credit met in subject area; Alnol: Verified credit met in subject area

Batch graduation agreement action from the class grid.

Release Notes

Version GIC 2.0 Pilot Release Candidate 4 - September 24, 2026

Pilot Release

- Custom-state schools can download and upload a structured Graduation Rules Worksheet, preview exact deterministic mappings, and create a typed draft without changing the existing document analyzer or bypassing validation and activation safeguards.
- Virginia WD and BLW uploads remain in their dedicated grid columns until an actual Reading or Writing SOL attempt exists; a failed SOL then displays with the qualifying substitute score.
- Credit/SOL checklists now mark current transcript courses as IP instead of X; X is reserved for completed courses. Economics and Personal Finance is listed separately under Other Requirements instead of English.
- Admins can create a school-specific tracking field directly on the Grid Columns page and immediately show it on Virginia or custom-state grids, profiles, reports, and Excel exports.
- Science, Math, and History score cells now group every stored attempt by tested course when hovered or opened.
- Added separate Virginia reports for students with no recorded Biology, Algebra I, or EOC Reading attempt.
- Added an MS EOC Test Taker marker and monitoring report for students who tested in middle school and need high-school scheduling review.
- Added Admin-only permanent deletion for incorrect merges and duplicate students, with typed confirmation, audit logging, and a pre-delete backup.
- Archived same-name students are no longer silently selected for a new active roster import.
- School-entered custom evidence is stored separately from calculated rule results so activation and rollback do not erase source values.
- Configuration-template imports remain drafts and no longer deactivate the currently approved rule package.
- Added a color-coded Employment credential column using the strongest WISE, Workplace Readiness, or NCRC evidence.
- NCRC now requires an earned NCRC result or all three component tests at level 3 or above.
- Added a class-filterable report for students still needing an Employment credential.
- Restored the clearly labeled, color-coded SOLs Complete column on every Virginia class grid.
- Removed inactive legacy Flask prototype modules and the unused shared fallback secret.

Release Notes confirm the installed version after an update.

Graduation Intelligence Center 2.0 Pilot User Guide | Fictional demo screenshots only

Update Workflow

Updates replace application files but should not replace the school_data folder. Before updating a live installation, close the program and make a copy of the full installation folder. Then apply the update package to the existing folder that contains application, runtime, and school_data.

14. Close the Graduation Intelligence Center server window.
15. Make a copy of the full installation folder as a safety backup.
16. Open the update ZIP.
17. Select all files and folders inside the ZIP.
18. Drag them into the existing installation folder.
19. Choose Replace the files in the destination when Windows asks.
20. Restart the program and check Release Notes to confirm the version.

Do not delete the school_data folder. That folder contains the school database, uploads, exports, logs, reports, settings, and backups.

Demo Reset Workflow

For repeated presentations, reset the demo after each session. The reset utility returns the demo to the fictional starting state while preserving the presenter login. It operates only inside the demo package and should never be pointed at a live school_data folder.

21. Close the demo server window.
22. Double-click Reset Graduation Intelligence Center DEMO.bat.
23. Confirm the displayed path is the demo_data folder inside the demo package.
24. Type RESET DEMO exactly when prompted.
25. Restart the demo before the next presentation.

Upload Cheat Sheet

Data Type	Use This Upload Type	Minimum Fields	Result
Student roster	Student Roster / Class List	First Name, Last Name, Graduation Year or Grade	Creates students and class grids.
Existing school grid	Existing Graduation Tracking Sheet	Names plus class year; map known and custom columns	Creates or merges a class grid.
State assessment scores	State Assessment Upload	Name or ID, Test Name, Score, Date when available	Updates SOL or state assessment cells and attempt history.
Workplace Docs	Workplace Docs Upload or substitute-test import	Name or ID, Score	Shows WD score and may satisfy Reading when rules allow.
Business Letter Writing	Business Letter Writing Upload or substitute-test import	Name or ID, Score	Shows BLW score and may satisfy Writing when rules allow.
NCRC	NCRC or Credential Upload	Student plus Workplace Docs, Graphic Literacy, Applied Math scores	Marks NCRC complete when all required parts pass.
Workplace Readiness	Credential Upload	Student plus WPR score	Marks credential complete when score meets the local passing rule.
Transcripts	Transcript File	Transcript files or transcript exports	Adds courses and credit progress to student records.

Troubleshooting Notes

- If a browser says 127.0.0.1 refused to connect, the server window is not running. Start the BAT file again.
- If other staff need access on a school network, they should use the host computer IP address supplied by district IT, not 127.0.0.1.
- If uploaded students go to the troubleshooter, check whether the roster/grid exists and whether names, IDs, or class years match.
- If an update seems not to apply, confirm the files were copied into the folder that contains application and school_data, then restart.
- If using the custom-state setup, no rule becomes active until an Admin validates and approves it.
